3.7 POWER MODE

The M90E36A has four power modes. The power mode is solely defined by the PM1 and PM0 pins.

Table-2 Power Mode Mapping

PM1:PM0 Value	Power Mode
11	Normal (N mode)
10	Partial Measurement (M mode)
01	Detection (D mode)
00	Idle (I mode)

4 SPI / DMA INTERFACE

4.1 INTERFACE DESCRIPTION

The interface can work in two modes: Slave (SPI) mode and Master mode, which is also named DMA (Direct Memory Access) mode. The interface mode is determined by the DMA_CTRL pin as below:

Mode	DMA_CTRL	Description
Slave (SPI) Mode	0	The interface works as normal four-wire SPI interface.
Master (DMA) Mode	1	The interface operates as a master and dumps data to the other devices.
